I have been a software developer for many years developing client-server architectures in C and Java. I am are very hard worker who likes challenges and problem solving. I work very well with others and enjoy helping other people succeed. Recently I have begun a quest to become a full-stack programmer. I have found that learning these new technologies is very exciting and will create new opportunities.

Languages:
Java, JavaScript, C, C++, HTML, CSS, JQuery, AJAX, ReactJS, SQL, Spring Boot

Platforms:
Windows, Linux

Servers:
Tomcat, WebSphere

Databases:
MySQL, PostgreSQL, Mongo, Firebase

Tools:

WorkiQ Workforce Analytics

Developed and support the Windows WorkiQ desktop activity product suite. The software suite contains both a Windows application to consume real time user activities and back end server to store the activities which can be displayed in dashboard.

Network Collector Client

Developed and support the Network Collector Client. This software is a PCAP application that runs on both Windows and Linux which captures Mainframe TN3270 data using a specialized Network Capture card and then stores the data to the WorkiQ backend server.

Education:
University of North Texas - 1983 - Bachelor of Science in Computer Science
